### Job Summary

We are looking for a **Production Support Engineer with strong knowledge of the MERN stack** (MongoDB, Express.js, React.js, and Node.js) to support, troubleshoot, maintain, and improve production applications. The ideal candidate should have experience in application support, incident management, debugging, monitoring, and resolving production issues while working closely with development, QA, DevOps and business teams.

**Location:** Indore, MP

### Key Responsibilities

- Monitor and support MERN-based applications running in production environments.
- Troubleshoot application issues across the **React.js frontend, Node.js/Express.js backend and MongoDB database**.
- Analyze application logs, server logs, API responses, and database queries to identify root causes.
- Investigate and resolve production incidents within defined SLAs.
- Perform **L1/L2/L3 application support** depending on issue complexity.
- Debug Node.js and React.js code to identify and fix production defects.
- Troubleshoot REST API issues, including authentication, authorization, request/response failures, and performance problems.
- Analyze MongoDB queries, collections, indexes, and database performance issues.
- Work with developers to identify bugs and provide detailed technical information for permanent fixes.
- Monitor application health, performance, availability, and error rates.
- Use tools such as **Git, Jira, Datadog or similar monitoring and ticketing tools**.
- Participate in incident management, problem management, and root-cause analysis (RCA).

- Maintain technical documentation, troubleshooting guides, runbooks, and knowledge-base articles.
- Identify recurring production issues and recommend automation or permanent corrective actions.
- Participate in on-call or rotational support when required.

### **Role Requirement:**

- This is a support role, which will primarily be operational during client working hours - i.e. night shift in India & also on holidays. The compensatory offs will be credited accordingly.

### **Required Technical Skills**

#### **MERN Stack**

- Good working knowledge of **MongoDB, Express.js, React.js and Node.js**.
- Experience troubleshooting React.js applications and frontend errors.
- Experience troubleshooting Node.js/Express.js REST APIs.
- Understanding of API integration, HTTP methods, status codes, JSON, and authentication mechanisms.
- Good knowledge of MongoDB queries, indexes, aggregation, and basic performance tuning.

#### **Production/Application Support**

- Experience in production application support or software engineering.
- Strong debugging and problem-solving skills.
- Experience analyzing application and server logs.
- Understanding of incident, problem, and change management processes.
- Ability to troubleshoot issues in a structured manner and perform root-cause analysis.
- Experience working with ticketing systems such as Jira or ServiceNow.

### **Soft Skills**

- Strong analytical and troubleshooting abilities.
- Excellent communication and interpersonal skills.
- Ability to work under pressure during production incidents.
- Good coordination skills with development, QA, DevOps and business teams.
- Strong ownership and willingness to work in a production support environment.

### **Experience**

- **3-5 years of experience** in application/production support, software development, or a related technical role.
- Hands-on experience with **MERN stack applications** is preferred.
- Experience supporting applications in a 24x7 or on-call environment is an advantage.

### **How we will take care of you:**

- Motivating compensation
- Medical & Life insurance
- Great working environment
- Rapid career development opportunities
